

Prefab Pump Room

The conventional construction of a pump room requires a combination of multidisciplinary teamwork among designers, building contractors, technical suppliers, electrical mechanical engineers and subcontractors. The diversity of this work requires solid coordination and consensus on site.

WB Firepacks introduces a completely new concept of prefabricated pump rooms or "Prefab Pump Rooms". This Prefab Pump Room will be delivered on site: totally installed and equipped.

Prefab Pump Room

Combining experience and knowledge

This concept has evolved over 40 years of combining experience of WB Firepacks and supported by the knowledge and experience of a professional construction company and a well known electrical installation company.

Benefits of a Prefab Pump Room:

- The Prefab Pump Room is ready to use and equipped completely. All that remains is connecting suction, discharge and test flanges to the sprinkler system and supplying the Prefab with electrical power.
- The Prefab Pump Room will be fully tested before delivery. We offer our customers the opportunity to attend a Factory Acceptance Test in our well-equipped test facility.
- The Prefab Pump Room can be designed to meet almost any requirement. We have already built Prefab Pump Rooms containing built-in water and foam tanks. Your requirements are the beginning of the project with creative solutions.
- We deliver reliable installations that meet the highest standards.

Our company is one of the most modern and respected suppliers in the field of Firepacks. We design, test and manufacture all Firepacks in house. With respect to reliability and problem-free operation, our Firepacks offer first-class fire protection.

Reliability is the keyword for all our personnel at every level in our organization. Over 10.000 companies in the world depend on reliability of our Firepacks, 24 hours a day, all year around. WB Firepacks always concentrates its efforts on the total concept of fire fighting!
